

THE SCOOP on fruits and nuts

The following new ANR publications are now available:

2006 Sample Costs to Establish an Orchard and Produce Almonds in the North San Joaquin Valley (flood and microsprinkler irrigation versions)

***Ferrisia gilli*: A New Mealybug Pest of Pistachios and Other Deciduous Crops**

Orchard Floor Management Practices to Reduce Erosion and Protect Water Quality

Cover Crops for Walnut Orchards

A cover crop is a noncash crop grown in the middles between tree rows and, in some situations, between trees within rows. Cover crops can provide many benefits in orchards and vineyards and have seen increasing use in recent years. This new handbook outlines a step-by-step process for success – including suggested cover crops, orchard factors to consider when choosing a cover crop, how and when to plant, and how to manage the cover crop.
